Product Overview

The XPOL-1-5G+ is Poynting's third generation "V3" of this very popular Cross Polarised (XPOL), cellular band, 2x2 or 4x4 MIMO antenna. The antenna has been completely redesigned from previous generations, featuring an all-new enclosure and high-performing antenna design. The XPOL-1-5G+ is now ultra-wideband, covering a broad frequency range from 410 to 6000 MHz. This allows it to be utilized across different cellular operators and technologies, and it is ready for future cellular technologies up to 6GHz for 5G applications. The 2x2 MIMO antenna option offers a 2-in-1 solution that includes two cross-polarized cellular antennas. Under most conditions, these cross-polarized antennas can potentially double your data rates.

The XPOL-1-5G+ antenna delivers exceptional performance with a peak gain of 6 dBi, nearly double the peak gain of the previous version (V2). This improvement enables superior signal strength and extended coverage in Fixed Wireless Access (FWA) deployments. The radiation patterns of this antenna are omni-directional and exceptionally well controlled, further enhancing its performance. This makes the antenna perfect for various application areas, such as urban, suburban, and commercial, to achieve the best possible coverage over a large area. The robust mechanical enclosure design makes the antenna weather, dust, and vandal resistant, granting it an IP65 rating, suitable for outdoor environments.

Antenna Performance Plots

VSWR

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The XPOL-1-5G+ delivers superior performance across all bands with a VSWR of $\leq 2:1$ across 90% of the bands.

*VSWR measured with a 5m low loss cable.

ISOLATION

Isolation

Isolation is a measure of how much energy from one port leaks into another port undesirably. Isolation of 0 dB between 2 ports means that there is no isolation and the energy from 1 port excitation is visible on another port. Isolation of -30 dB or more means that <0.1% of 1 port's energy is leaked into another. A good isolation is under -10 dB.

GAIN (EXCLUDING CABLE LOSS)

Gain* in dBi

6 dBi is the peak gain across all bands from 410 – 6000 MHz

Gain @ 410 – 470 MHz:	-4 dBi
Gain @ 617 – 960 MHz:	2 dBi
Gain @ 1427 – 1517 MHz:	2.5 dBi
Gain @ 1710 – 2700 MHz:	5 dBi
Gain @ 3300 – 4200 MHz:	6 dBi
Gain @ 4400 – 6000 MHz:	5.5 dBi
